Education

PES University

Bachelor's of Technology in Computer Science & Engineering - CGPA : 8.20

September 2022 - Present

Bengaluru, Karnataka

Geetanjali Olympiad School

12th CBSE Boards : 86%

June 2020 - July 2022

Bengaluru, Karnataka

Delhi Public School Bangalore East

10th CBSE Boards : 90%

June 2007 - May 2020

Bengaluru, Karnataka

Experience

Elfonze Technologies Pvt. Ltd.

Software Engineering Intern

January 2026 - April 2026

Bengaluru, Karnataka

- Designed and deployed an AI-powered document retrieval system using vector embeddings and Annoy for high-speed semantic search, exposed via FastAPI.
- Developed full-stack enterprise applications, including a travel expense tracker and a custom ticketing workflow system, integrating an SQLite database.

Centre of Cognitive Computing and Computational Intelligence

Summer Research Intern

June 2025 - August 2025

Bengaluru, Karnataka

- Engineered an AI-powered career advisory platform that parsed 30,000+ job postings and 90,000+ courses to analyze skill gaps and recommend learning pathways with 0.98 precision.
- Optimized a dual-tower DSSM (Deep Structured Semantic Model) architecture, achieving a training loss of 0.1 and a validation loss of 0.035.

Projects

AI-Powered Personal Booking Agent using LangGraph🔗 | Python, LangGraph, React, Groq, MCP

April 2026

- Engineered an LLM-powered assistant using LangGraph for tool-calling, multi-step reasoning, and scheduling automation.
- Achieved reliable booking workflows with conflict detection, HITL support, and low-latency query handling.

TraceOps : Multi-Agent Incident Investigation System 🔗 | Python, LangGraph, MCP, Ollama

January 2026

- Developed an multi-agentic system using LangGraph and Ollama, accelerating root cause analysis for distributed microservices.
- Integrated MCP to securely access local logs, enabling real-time correlation of error patterns across services.

Detection & Mitigation of Replay Attacks in CCTV Systems 🔗 | Python, HTM, SHA-256, FastAPI

October 2025

- Implemented a HTM based model for lightweight, real-time anomaly detection of motion patterns, achieving an anomaly score of 0.05 on normal frames.
- Designed SHA-256-based frame hashing and verification pipeline ensuring tamper-evident and relevant CCTV footage.

Blockchain-Powered AI Healthcare Insights 🔗 | Python, IPFS, Multi-Chain Blockchain, Ollama, OCR

March 2025

- Linked Electronic Health Records (EHR) stored on IPFS to Blockchain IDs to ensure data integrity and traceability.
- Applied OCR and Ollama on patient histories to accelerate clinical decisions, predict drug interactions, and recommend treatments.

Technical Skills

Languages: Python, R, C, C++, Java, Rust

AI/ML: PyTorch, Scikit-learn, NLTK, SpaCy, Matplotlib, LLM, Seaborn, Ollama

Databases: MySQL, SQLite, MongoDB, ChromaDB

Tools / Platforms: GitHub, Vscode, Jupyter, Google Colab, Streamlit, Git

Operating Systems: Windows, Ubuntu, Linux

Achievements

Praxis Hackathon: Ranked Top 7 out of 50 teams for building AI-Powered Personal Booking Agent using LangGraph.

Heal-O-Code 2.0 Hackathon: Secured Top 6 out of 50+ teams by building a AI Based Healthcare Decision Support tool.

Encode.AI Agentathon 2.0: Achieved 2nd place for building a Multi-Agent Incident Investigation System.

HealthHack 4.0 Hackathon: Came in Top 8 out of 80 teams by developing a Mental Health Support Platform.

Anveshana 2026: Selected among Top 11 out of 170 teams for Detecting and Mitigating Replay Attacks in CCTV systems.
